

FOUNDATION PLAN - SHEET S1

NTS

Lateral Force Resisting System (LFRS) Elements :

— (N) Shear Wall

The main structure of the building is covered in a dense network of blue metal scaffolding. The scaffolding is supported by wooden planks that serve as work platforms. The building's facade is a combination of white stucco and green horizontal siding. Several windows are visible, some with white frames and others with dark shutters. The scaffolding extends from the ground level up to the top of the building, with a few levels of wooden decking visible.

To the right of the scaffolding, the building's exterior is finished with green horizontal siding. A white stone or concrete wall runs along the base of the building, separating it from the sidewalk. A small tree is planted in a planter box on the sidewalk. A white portable toilet is positioned near the base of the scaffolding. Yellow caution tape is strung across the sidewalk in front of the building. A traffic cone and a sign with the letters 'ACE' are also visible on the sidewalk.
